

From Zero to React Developer in 30 Days

A daily learning plan covering HTML, CSS, JavaScript, React, Figma, Figma MCP and AI tools.
Every day: clear tasks to complete + a short YouTube video (≤ 25 min) to watch and code along.

- 30 DaysFull roadmap
- 4 WeeksClear phases
- 6+ ProjectsBuild & deploy
- Figma MCPDesign→code
- ≤25 minVideos only

Cursor IDE — Windows Setup Guide

AI-powered code editor · free tier available

1	Go to cursor.com/download Click Download for Windows — saves a .exe file cursor.com/download	5	Install Node.js LTS Download Node.js LTS for Windows — required to run React nodejs.org/en/download
2	Run the installer Double-click CursorSetup-x64.exe → follow wizard → Launch	6	Open a project folder File → Open Folder → select the folder you want to work in
3	Sign up / log in Create a free account — 14-day Pro trial activates automatically	7	Key shortcuts (Windows) Ctrl+K inline AI edit · Ctrl+L AI chat · Tab accept
4	Import VS Code settings First launch: click Import from VS Code — keeps all your extensions	8	Recommended extensions ES7 React Snippets · Prettier · Tailwind CSS IntelliSense docs.cursor.com

Figma MCP — Connect Figma to Cursor

Use on Day 21 · Reads your design directly into the AI chat

1	Download Figma Desktop figma.com/downloads → install Windows app figma.com/downloads	2	Switch to Dev Mode Open any Figma file → toggle Dev Mode in toolbar	3	Enable MCP Server Right panel → Enable MCP Server → click Copy URL
4	Open Cursor MCP Settings Cursor → Settings → Cursor Settings → MCP tab → + Add Server	5	Paste the JSON config { "mcpServers": { "figma-desktop": { "url": "http://127.0.0.1:3845/mcp" } } } Official Figma MCP Guide	6	Use it in Cursor Select frame in Figma → Cursor chat → Build this as a React component

WEEK 1 —HTML, CSS & Dev Setup			Days 1–7
Day 1 Setup Dev Environment Setup - Install Node.js LTS — nodejs.org - Install Cursor IDE (see page 1 guide) - Create first project folder & open in Cursor Fireship · Cursor in 10 min · ~10min	Day 2 HTML HTML Structure - Tags: html, head, body, div, p, h1-h6 - Links <a>, images , lists - Build a simple 3-section webpage Traversy · HTML Crash Course · ~25min	Day 3 CSS CSS Basics - Colors, fonts, borders, backgrounds - Selectors: class, id, element, descendant - Box model: margin, padding, border, width Web Dev Simplified · CSS in 20 min · ~20mi..	
Day 4 CSS Flexbox - display:flex, flex-direction, flex-wrap - justify-content, align-items, gap - Build: horizontal nav bar with Flexbox Web Dev Simplified · Flexbox · ~15min	Day 5 CSS CSS Grid & Responsive - grid-template-columns, grid-gap - Media queries: @media (max-width: 768px) - Make the card grid respond to screen size Kevin Powell · Grid in 20 min · ~20min	Day 6 CSS CSS Hover & Transitions :hover selector on buttons and cards - transition: all 0.3s ease-in-out - Simple fade-in with @keyframes animation Fireship · CSS in 100 sec · ~2min	
Day 7 Project Week 1 Project: Portfolio Page - Build: hero, about, skills sections - Apply Flexbox + responsive layout - Push live to GitHub Pages — get a real URL Kevin Powell · Build Responsive · ~22min			

WEEK 2 —JavaScript Fundamentals			Days 8–14
Day 8 JS JS Variables & Types - var / let / const — which to use when - Strings, numbers, booleans, arrays - console.log and Chrome DevTools debugger Fireship · JS in 100 sec · ~2min	Day 9 JS Functions & Control Flow - Regular functions vs arrow functions - if / else, switch, ternary operator - Loops: for, while, forEach Web Dev Simplified · Functions · ~18min	Day 10 JS Arrays & Objects - Array: map, filter, find, reduce - Object: keys, values, destructuring, spread - Build: simple student grade calculator Traversy · Arrays in 20 min · ~20min	
Day 11 JS DOM Manipulation - querySelector, getElementById - innerHTML, textContent, classList.add/remove - addEventListener: click, input, change Traversy · DOM Crash Course · ~20min	Day 12 JS Forms & Events - form submit: event.preventDefault() - Get value from input fields - Build: live character counter + form validator Web Dev Simplified · Events · ~18min	Day 13 JS Fetch API & Async/Await - What is async and why it matters - fetch() + await + .json() pattern - Display API data in the DOM with map() Fireship · Async Explained · ~12min	
Day 14 Project Week 2 Project: Weather App - Fetch OpenWeatherMap free API - Show city name, temp, condition icon - Change background color by weather state Traversy · Weather App · ~20min			

WEEK 3 —React Core + Figma MCP Workflow			Days 15–21
Day 15 React React Introduction - npx create-react-app my-app - JSX: HTML-like syntax inside JavaScript - Understand App.js, index.js, public folder  Fireship · React in 100 sec · ~2min	Day 16 React Components & Props - Functional components — write and import - Props: pass data from parent to child - Build: reusable Card component with props  Web Dev Simplified · Props · ~20min	Day 17 React State with useState - useState(initialValue) syntax - Update state on button click - Build: counter + like-button with state  Web Dev Simplified · useState · ~14min	
Day 18 React useEffect & Data Fetching - What is a side effect in React - Fetch data on mount with useEffect - Dependency array: [], [value], none  Web Dev Simplified · useEffect · ~15min	Day 19 React Lists, Keys & Conditionals .map() to render a list of components - key prop: must be unique, why it matters - Conditional: {condition && <Component />}  Traversy · React Lists · ~15min	Day 20 Figma Figma Basics for Developers - Frames, layers, auto-layout, components - Dev Mode: copy CSS, spacing, font values - Export SVG icons and PNG assets to code  DesignCourse · Figma for Devs · ~20min	
Day 21 FigmaMCP Figma MCP Setup - Install Figma Desktop app (Windows) - Dev Mode → Enable MCP Server → copy URL - Add URL to Cursor MCP settings — full guide on page 1  Figma · Official MCP Docs · ref			
WEEK 4 —Advanced React, AI Tools & Deploy			Days 22–30
Day 22 FigmaMCP Figma MCP → React Code - Select a Figma frame in Dev Mode - Open Cursor chat → ask: Build this component - Review, adjust and integrate generated code  Figma · MCP Demo · ~8min	Day 23 React React Router - npm install react-router-dom - BrowserRouter, Routes, Route, Link - Navigate between Home, About, Contact pages  Web Dev Simplified · Router · ~15min	Day 24 Style Tailwind CSS - npm install tailwindcss, configure config file - Utility classes: flex, p-4, text-lg, bg-blue-500 - Replace CSS files with Tailwind in minutes  Fireship · Tailwind in 100 sec · ~2min	
Day 25 React Forms & Validation - Controlled inputs: value + onChange - Show error messages below each field - Install React Hook Form for cleaner code  Web Dev Simplified · React Forms · ~18min	Day 26 AI AI Tools: v0.dev & Claude - Screenshot a Figma frame → paste to v0.dev - Get a full React component — review and copy - Prompt Claude: Explain and improve this code  Traversy · v0.dev Walkthrough · ~15min	Day 27 AI Copilot & Cursor AI - Tab key accepts Copilot inline suggestions - Ctrl+K for inline AI edit in Cursor - Ask: What does this function do? Refactor this  Fireship · GitHub Copilot · ~6min	
Day 28 React Context API - createContext(), useContext() pattern - Wrap app in Provider, consume anywhere - Build: dark / light theme toggle globally  Web Dev Simplified · Context · ~14min	Day 29 Deploy Deploy to Vercel - Push project to GitHub repository - Log in to vercel.com → Import Git repo - Add env variables, click Deploy — live in 60 sec  Traversy · Vercel Deploy · ~12min	Day 30 Project Final Project - Design 3 screens in Figma (login, home, detail) - Implement all screens: MCP + React + Tailwind - Deploy on Vercel — add live link to portfolio  JavaScript Mastery · React Project · ~20mi.	
Completion goal: Deploy your final project to Vercel, push to GitHub, and share the live link on LinkedIn. You are now a React developer.
